PERSONAL SUMMARY

Graduate Statistics and Analytics student specializing in Computational Analytics and currently supporting university departments through analytical reporting and data solutions using Power BI, SQL, and Microsoft Fabric. Experienced building cloud data pipelines and analytics-ready models with Python, BigQuery, Airflow, dbt, and Terraform.

SKILLS SUMMARY

- Languages & Querying: Python, SQL, R, C
- Data Engineering & Cloud: BigQuery, Google Cloud Storage, Apache Airflow, dbt, Terraform, Docker
- Analytics & BI: Power BI, Microsoft Fabric, Looker Studio, Tableau, Excel
- Data Science: Pandas, NumPy, scikit-learn, regression, hypothesis testing, feature engineering
- Development & CI/CD: Git, GitHub Actions

EDUCATION

M.S. in Statistics and Analytics (Concentration in Computational Analytics) Expected: Dec 2026
University of Arkansas, Fayetteville, AR
B.S. in Telecommunication Technologies Engineering Completed: May 2025
University Carlos III de Madrid, Spain
Exchange Student, University of Arkansas 2024 - 2025
Curriculum equivalent to Electrical and Computer Engineering (ECE)

WORK EXPERIENCE

AI Innovation Analyst Intern Aug 2026 - Present

University of Arkansas

- Research Microsoft Fabric IQ, ontologies, semantic models, and data agents for an HR AI prototype.
- Design and evaluate prompts, retrieval workflows, and performance metrics using enterprise HR data.

Graduate Assistant / Strategic Data and Process Innovation Aug 2025 - Present

University of Arkansas

- Develop analytical reports using Power BI, SQL, and Microsoft Fabric for multiple university departments, and collaborate with the Computer Vision Lab to integrate AI-driven solutions into administrative processes, enhancing data-driven decision-making.

Academic Personal Tutor 2019 - 2022

Freelance

- Tutored high school students in Mathematics, Physics, and English, helping them strengthen conceptual understanding and improve exam performance.
- Managed up to 10 hours per week while pursuing a full-time degree.

Solar Panels Tracking Software Development July 2024

JARMAR

- Assisted in the development of a code in C using the Silicon Labs IDE and ESP32 technology used for the monitorization of solar panel performance.

SELECTED PROJECTS

Machine Learning Classifier for Fault Diagnosis in Rotary Machines Spring 2025

- Built a machine learning-based fault detection system using SVM, Random Forest, and other classifiers to predict early-stage component failures.
- Processed vibration and performance data for predictive maintenance, optimizing model accuracy through tuning and cross-validation.

End-to-End Cloud Data Pipeline for Housing Analytics Summer 2026

- Built a 13-task Airflow DAG to load housing data from CSV into Google Cloud Storage and BigQuery.
- Built 10 dbt models with 61 passing tests; automated Terraform infrastructure and GitHub Actions CI.
- Built a Looker Studio dashboard for occupancy, bed availability, and student assignments by building.

LANGUAGES

- Fluent in Spanish (mother tongue)
- Fluent in English
